

ABSTRACT

A solid non-effervescent compressed dosage form comprising an ibuprofen medicament and a carrier material comprising a compressible filler component combined with a disintegrating component wherein the ibuprofen medicament is present to an extent of 35% or more by weight of the dosage form, characterised in that the carrier material further includes an alkali metal carbonate or bicarbonate in an amount such that the dosage form has a crushing strength in the range of 6.5-15Kp and a disintegration time of less than 10 minutes. Such rapidly disintegrating compositions are particularly valuable in the treatment of pain and fever.
